

## **e-Training for Lean Manufacturing**

*A customized, quick-response electronic training solution.*

Our unique approach to e-Training integrates Enterprise Systems Partners' process analysis techniques and educational best practices with your knowledge of your procedures, processes, and equipment to facilitate and strengthen your lean manufacturing initiatives.

### **e-Training can help you:**

- Document processes and procedures.
- Capture process improvements.
- Build best practices and consistency.
- Realize a higher return on your investment in lean and continuous improvement initiatives.
- Reduce employee turnover.
- Reduce training costs.
- Increase employee confidence and morale.
- Build teamwork and employee participation.

### **What are some of the advantages of e-Training?**

- Learners see and hear the actual processes and procedures as demonstrated by your best personnel.
- Information is arranged into clear, concise segments utilizing industrial engineering practices.
- Information and digital "objects" can easily be updated **by you or us** as your processes and procedures change.
- Video clips can be stopped and started with the click of a mouse to allow closer focus and explanation of particular parts or motions.

### **Why choose e-Training over a traditional VHS training video?**

VHS videos are linear and only allow linear navigation, such as fast-forward and reverse. When information becomes obsolete in a VHS video, you can't easily skip or remove it. E-Training allows you to customize training by jumping to the slides, video clips, and information you want and gives you the flexibility to re-arrange, delete, and add chunks of information and digital "objects" as your needs change.
